

Low Profile Transmission Jacks

Use—Aids in the removal, installation, and transportation of heavy-duty diesel truck transmissions.

Design—Built with a wishbone design for an ultra-low-profile solution.

Features—360° rotating handle and an adjustable head and saddle. The saddle allows full side-to-side and front and back adjustment while the universal mounting head makes positioning effortless. A safety bypass system keeps the unit from being used beyond its rated capacity.

Materials—Constructed with a high-grade steel for maximum strength and a powder-coated finish to prevent rust and corrosion.
